

## Tips to prevent mouth ulcers

Unfortunately, there is no guaranteed way to help someone reduce or eliminate mouth ulcers completely as people have different immune systems and react differently to stress and disease.

However, you should practice good dental hygiene, taking care not to damage your teeth and gums. Visit the dentist every six months for a check-up.

You also need a healthy diet that enables your immune system to stay strong and resist infections.

Avoiding food and drinks that are too hot is essential, and you could benefit from relaxing and reducing your stress.

## Testimonials

*"Absolutely amazing, I can't believe how fast it works, I really can't feel anything from my ulcers at all!"*

Michelle, Pharmacy Counter Assistant,  
Swillington Pharmacy, Leeds

*"Wow, incredible! I've suffered with almost permanent mouth ulcers for 15 years. My GP has prescribed every product on the market and I still suffered. Oralmedic has given me my life back... and it's a pain-free one!"*

Connah Sutherland, Northern Ireland

*"It worked really quickly, the pain is gone, amazing!"*

Jill, Pharmacy Counter Assistant,  
JDS Pharmacy, Newport

# Eliminate mouth ulcer PAIN IN SECONDS

**ONCE ONLY APPLICATION**

# Eliminate mouth ulcer PAIN in seconds

## ONCE ONLY APPLICATION

### What are mouth ulcers?

A mouth ulcer is a painful sore in the mouth on either the cheeks or gums. They are usually red or yellow and can last up to ten days.

Mouth ulcers can be caused by accidental damage, such as brushing your teeth too hard, biting the inside of the mouth or orthodontic braces or dentures that rub against the gums.

Mouth ulcers can also appear when you are feeling stressed or under the weather, these are called aphthous ulcers.

### Who gets mouth ulcers & why?

Mouth ulcers are very common, with most people suffering from an ulcer at one time or another. Over 20% of the population have recurrent mouth ulcers at some time in their lives. Often beginning in adolescence, most people suffer less frequently as they get older.

People with braces or dentures are especially prone to mouth ulcers as appliances may rub, causing soreness.

With regard to the causes of mouth ulcers, the reality is that nobody knows precisely what triggers an outbreak. However, credible clinical studies have linked this medical problem to stress and allergies.

People who are immuno-compromised (usually due to disease, malnutrition or immuno-suppressive therapy) are also prone to mouth ulcers.

Some medical experts associate mouth ulcers with vitamin deficiencies.

**ORALMEDIC®** is a revolutionary new product that takes mouth ulcer treatment to a new level. Just one application eliminates mouth ulcer pain in seconds!

### How does ORALMEDIC® work?

**ORALMEDIC®** contains a patented active ingredient called HybenX™. This works in two ways:

- Firstly, it seeks out and attacks dead or damaged tissue.
- It then reacts with the damaged tissue in seconds to create a seal or barrier over the site, which facilitates the healing process & prevents further infection.

Damaged tissue is located within the ulcer covering the site of the infection

**ORALMEDIC®** seeks out and selectively removes damaged tissue. **ORALMEDIC®** rapidly extracts water from the site.

The unique combination of ingredients in **ORALMEDIC®** reacts with the damaged tissue, causing it to coagulate. This creates a seal over the ulcer which:

- Prevents contamination,
- aids the healing process, and
- covers nerve endings to provide pain relief.

### How to use ORALMEDIC®

- 1 Dry affected area using the cotton drying bud.

- 2 Hold the applicator with coloured ring up. Gently bend the coloured ring to one side until it snaps. **ORALMEDIC®** will flow to the opposite end.

- 3 Apply to the affected area for 5-10 seconds, ensuring the entire ulcer is covered. **A brief "stinging" sensation is experienced immediately upon application.**

- 4 Rinse mouth thoroughly with water and spit out.

### Why is ORALMEDIC® so effective?

Conventional treatments (e.g. gels, creams) are applied on top of the affected area & take a long time to penetrate the damaged tissue before reaching the infected site.

**ORALMEDIC®** contains a patented active ingredient; HybenX™, which extracts water from the damaged tissues & creates a seal. This protects the site, preventing contamination and aiding the healing process.
